

QUICK-OPENING ADVERTISING FIGURE KNIFE BLOCK

(5 Pt. to 45 Pt. Capacity)

This type of knife block is provided with a lever for quickly opening the right-hand knife to permit a slug with overhanging characters to pass the knives without trimming.

To open the right-hand knife, to permit the first or overhanging slug to pass, the lever is pushed downward. After the first slug is ejected, the lever is pulled upward bringing the right-hand knife to its original

position to trim second or supporting slug.

This quick-opening lever, when used with point size settings up to 14 points, makes it possible to open the right-hand knife an additional 30 points. When the knives are set for more than 14 points trim, the downward motion of the lever opens the right-hand knife to a maximum 45 point opening.

All other adjustments are made as described on the opposite page.
