

ASSEMBLER STAR WHEEL DRIVE

The Assembler Star Wheel Drive has been redesigned to incorporate an oilite flanged Bearing (D-7158) to provide additional support for the Sprocket (D-6808) and also for the Assembler Star Shaft.

In addition, the Sprockets (D-6806 and D-6808) are made of molded black nylon instead of steel and are interchangeable with the steel sprockets. The (D-6808) Sprocket is molded with a flange to guide the toothed belt.

APPLIED IN FACTORY TO MODELS

All new Comet Machines.

OUTSTANDING MODELS
