

SECOND ELEVATOR BAR PLATE GUIDE

The Second Elevator Guide components have been redesigned to provide a smoother action when matrices are lifted by the Second Elevator from the Intermediate Channel. The Second Elevator Guide (Lower) (D-7176), has been redesigned and the Intermediate Channel Front Plate has a clearance cut added for a new Second Elevator Bar Plate Guide (G-4933).

The new Bar Plate Guide (G-4933) in conjunction with the Second Elevator Guide Lower (D-7176), operates to hold the matrices in a vertical position until they are clear of the Intermediate Channel.

APPLIED IN FACTORY TO MODELS

All New Comet Machines.

OUTSTANDING MODELS

Can be applied to all outstanding "Comets". See Mailing Sheet #642.

First applied to Model "Comet" - Serial #1495
