

LINOTYPE IMPROVEMENT SHEET

NO. 323

OLD CONDITION

NEW CONDITION

FIRST ELEVATOR JAW LINE STOP (30 EM)

The Automatic Sliding Line Stop has been redesigned to improve the contact of the transfer Rod when it engages the Line Stop to return it to normal position. This Line Stop eliminates the need for Springs formerly used to hold the Line Stop in position. The Line Stop can also be straightened if it becomes bent.

OUTSTANDING MODELS

Can be applied to Outstanding Models in place of the E-3853 and E-4450 Line Stop. It also can be used in place of the E-3706 Quadder Type Line Stop.
