

LINOTYPE IMPROVEMENT SHEET

NO. 325

UNIVERSAL TYPE FIRST ELEVATOR
BACK JAW (30 EM)

UNIVERSAL TYPE FIRST ELEVATOR BACK JAW (30 EM)

A Universal Type First Elevator Back Jaw has been designed to replace the three previous types of Jaws by providing clearances as shown. The New Back Jaws are made in three different lip thicknesses.

The Universal Back Jaw is designed to replace the Quadder Type Back Jaw in addition to the two other types illustrated. It has no provision for the E-3695 Matrix Detaining Spring formerly used in Quadder Type Back Jaws, since the Matrix Detaining Spring in the First Elevator Front Jaw has proven sufficient to hold the matrices in position properly.

APPLIED IN FACTORY TO MODELS

All New Machines without Hydraquadder.

OUTSTANDING MODELS

Can be applied to Outstanding Models.
